

The only reason I can see that the NAB wants to inhibit XM's Instant Traffic & Weather broadcasts is because their programing is successful in giving listeners something they want. My wife and I travel extensively and we are willing to pay for commercial free information that we can receive where and when we want it, not a during break in commercials. This is a right, for the people who supposedly own the radio air waves, that should not be abridged by lobbyists, or politicians who claim to represent the people, but do not. We strongly urge the rejection of NAB's petition 04-160. It has not gone unnoticed that many "local" stations are now part of nationwide broadcasting systems that completely disregard local weather, news and information. At least with XM we can get instant results, please don't take that away from us.
